

## 1. Concern regarding your child's or your own fluency/articulation/language/voice

## 2. Contact our office for an initial consultation

(either by calling us directly at 303-247-1632 or by e/ mailing us at [info@stutteringrecovery.net](mailto:info@stutteringrecovery.net) )

During this initial conversation we are interested in finding out as much as possible about your concerns regarding your child's/your own fluency.

In order to most efficiently determine next steps we will ask you a number of questions, specific to the area of dysfluencies these questions may include:

- How long has it been until the onset of the observed dysfluencies?
- How old was your child/were you when the dysfluencies were first noticed?
- What has been done about the observed dysfluencies since onset? ...

Based on the answers that we will collect during this initial consultation, we will recommend one of the following steps:

### Follow-up Consultation

After the initial consultation a follow-up appointment will be scheduled.  
In most cases, one of our clinicians will contact you by phone within a determined time-frame.

### Full Evaluation

In case a full evaluation is recommended, we will ask you to fill out a more detailed case history form (available as a download on this website)

An appointment will be scheduled to come to one of our clinics for a full evaluation
